Reasons for Allowance

Claims 1 and 2: **Waseda** et al disclose in figure 6 an adaptor (connector 20) being connectable to a mobile phone unit (mobile phone 30) through a low power wireless system or a wired cable and connected to an IP-PBX (PBX 10) through an IP network (internet “IP” 100/200), comprising:

a telephone unit controller (fig. 6: mobile unit controller 22) for managing resource data of the mobile phone unit (paragraphs 0011-13 & 0016: communications control).

Nonetheless, **Waseda** et al do not specifically disclose a *VoIP* extension section converting an input telephone number into a telephone number of a private IP telephone corresponding to the input number when the input telephone number is inputted into the mobile phone unit and calling the telephone number of a private IP telephone; and means for linking a telephone directory of the mobile phone unit and a telephone directory of the IP-PBX. **Ranalli** et al teach a *VoIP* extension (Directory Service) section converting an input telephone number into a telephone number of a private IP telephone corresponding to the input number when the input telephone number is inputted into the mobile phone unit and calling the telephone number of a private IP telephone ([0039]: a Directory Service (DS) converts “unique identifiers” – such as a standard public mobile number – to a corresponding IP address for e.g. an IP-PBX).

Yet, **Waseda** et al and **Ranalli** et al, in combination or alone, do not exactly teach “a memory editor which links a telephone directory of the mobile phone unit and a telephone directory stored on the IP-PBX” as recited in amended claims 1 and 2.

Thus, claims 1 and 2 are deemed to be non-obvious over prior art of record.

Claims 3, 4, 7, 8, 9 and 10 depend on claims 1 and 2, and are thus, considered to be non-obvious over prior art of record as well.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. Yoshizawa et al, JP 2002-111874 A: call forwarding database that stores a customer telephone number and e-mail address wherein the data is forwarded through a public/router adaptor

2. Ito et al, JP 8275238 A: portable terminal obtains a PBX station number and taking a least expensive path according to a base station PBX stored list to lower phone bill

3. Otsuka et al, US 6571108 B1: convert radio unit ID into an identification of a PBX

4. Nishida, US 5995828: a phone number conversion section in a PBX automatically converts incoming call directed to a public telephone number registered in a public base station to an incoming call directed to a corresponding extension phone number in the PBX with reference to the connection with public phone numbers

5. Lautenschlager, US 5490212: a memory device assigns public phone numbers to private phone numbers and translating private phone numbers into public phone numbers

6. Kim, US 7120135 B2: when an unregistered mobile terminal makes an in-building call, a public / private communication service unit bypasses the call

7. Lu et al, US 6829477 B1: hybrid mobile station having a public phone number and a private phone number associated with a subscriber identification module, SIM
